

FUS TREATMENT CASE OVERVIEW

Nationality: Chinese Gender: Male Age: 65

Symptoms: Bilateral hand tremors appeared after the age of 60 and have gradually worsened.

Symptoms are more pronounced when holding light objects such as a pen, chopsticks, or a cup. There is no impact when holding heavy objects or driving. His father and siblings have had similar symptoms.

Diagnosis: Essential tremor

Treatment history: He previously underwent drug therapy at a hospital in his home country; however, no improvement was observed and side effects occurred, so he discontinued the medication.

Expectation: To be able to carry out daily life without difficulty

Schedule (example)

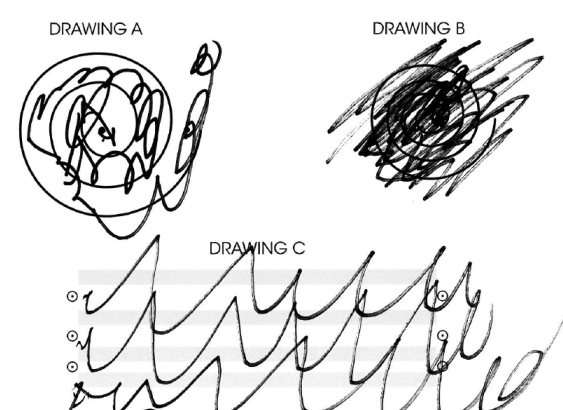

- September 3: Hospital visit and examinations (FUS treatment eligibility assessment: CT scan, MRI, and tests required for hospitalization)
- September 9: Explanation of results (decision on eligibility for FUS treatment)
- September 10: Hospital admission
- September 11: FUS treatment
- September 12: MRI examination and discharge
- September 26: Remote follow-up consultation

Patient's Testimonial

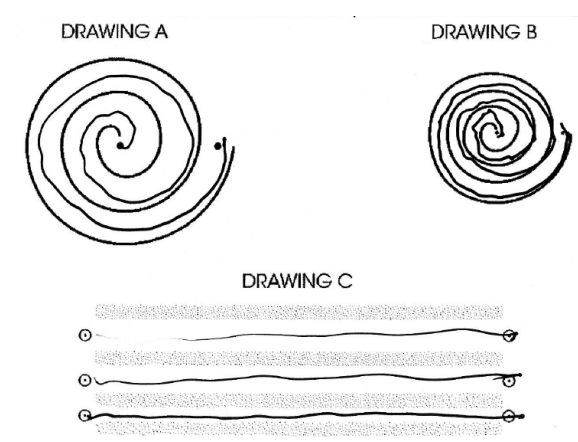

The four hours I spent in the treatment room felt longer than usual, but the results were immediate. I could draw circles more smoothly. The translators and nurses cheered me on throughout the process. My tremors decreased significantly, and thanks to the translator's continuous support, I was able to endure the discomfort from the head fixation.

The treatment went very well. I can now draw circles freely, sign my name, and perform various fine movements. Those four hours of perseverance were worth it, as they give me decades of improved quality of life. This treatment has cured my hand tremors and will make my future days even happier.

Before

After

Although my inpatient stay was only three days and two nights, it was a memorable experience. The doctors were highly skilled, the medical equipment advanced, and the staff cooperative and patient-friendly. I came to Kaikoukai based on word of mouth and found the treatment far more effective than I had expected.

On behalf of myself and my family, I sincerely thank Kaikoukai. I have many friends with similar symptoms, and I am confident Kaikoukai will be an excellent option for them in the future.
